Climate Change: What Do Scientists Say?

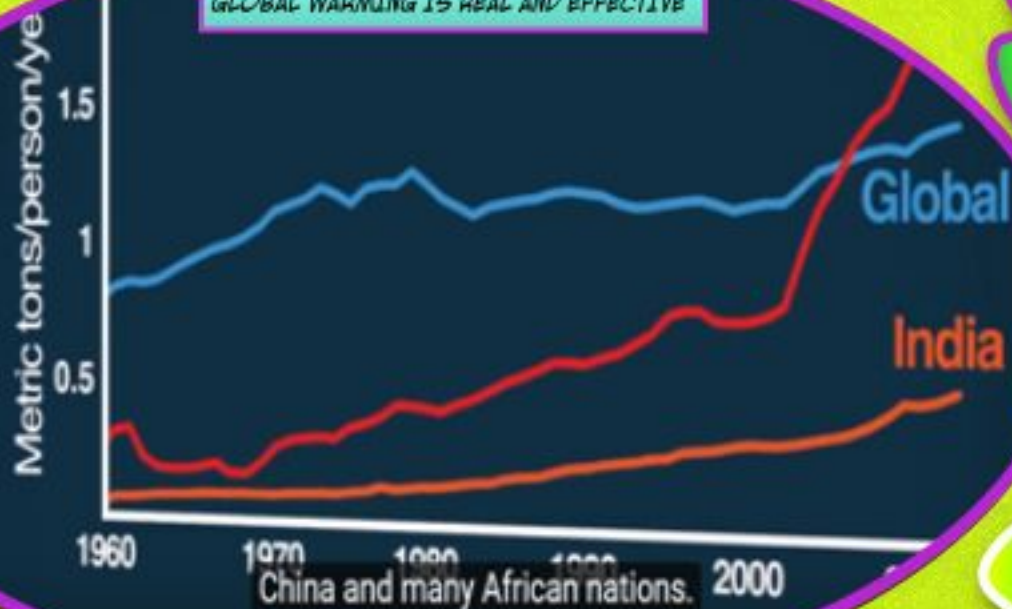

group 2
skeptics

There are many reasons why the climate changes:

as well as a myriad of other inputs. None of these is fully understood, and there is no evidence

GLOBAL WARMING IS REAL AND EFFECTIVE

group 1
IPCC

recent climate change:
burning of fossil fuel

into the atmosphere and, they believe, this might eventually dangerously heat the planet.

GREENHOUSE GAS EMISSION IS ECOLOGICAL THREAT

What Do Scientists Say?

global warming alarmism
provides them with the things they most want

money & power

most want: For politicians it's money and power. For environmentalists it's money
